

ABSTRACT

A cable end connector assembly (10) includes an insulative housing (12), a plurality of contacts (130) received in the insulative housing, a spacer (13) mounted to a rear end of the housing, a cable (14) comprising a plurality of conductors (140) electrically connecting with corresponding contacts, a casing (15) over-molded with the insulative housing and the cable, and a locking member (16). The locking member comprises a retaining section (163) secured with the casing, a main section (160) extending forwardly from the retaining section, and a locking section (161) extending forwardly from the main section. The locking section has a resilient tab (1611) resiliently abutting against the casing and a pair of latch portions (1610) for locking with corresponding portions of the complementary connector.
